

Miguel Rico

miguelricodev@gmail.com | 518-415-7540 | Santa Clarita, CA

Full-stack Software Engineer with 12+ years of experience shipping and owning features end-to-end using TypeScript, React, Node.js and Python. Proven track record of leading front-end architecture for large-scale platforms. Experienced across clean energy, edtech, and game development. Hands-on experience with mentoring software engineers and driving cross-functional collaboration in environments ranging from early-stage startups to large engineering orgs..

Senior Software Engineer

PowerFlex

December 2020 – March 2026

- Worked with VP of Engineering to fully develop MVP of their EV platform.
 - Led front-end architecture for an enterprise EV charging management platform (React, TypeScript) with a focus on maintainability and performance as usage grew.
 - Built Full-Stack reporting features, owning backend services.
 - Cross team feature building to let Amazon self service their own site creation. This involve websockets and real time progress updates in the UI
 - Contributed to backend services that update Firmware on physical EVSE chargers.
 - Diagnosed and resolved frontend performance bottlenecks, including bundle size reduction, unnecessary re-renders, and lazy loading/code splitting, improving responsiveness across high-traffic dashboard views.
 - Built and owned operational and analytics dashboards (real-time charger status, usage/reporting views) for an analytics-heavy, data-dense application.
 - Maintained and extended CI/CD workflows (GitHub Actions) for frontend deployment, including updating build/deploy configurations to support new environments and release needs.
 - Translated Figma wireframes and design systems into production-ready UIs, partnering directly with product managers, designers, and backend engineers to shape UX decisions, not just implement them.
 - Built and maintained backend services in Node.js, FastAPI, and Flask within an event-driven microservices architecture using NATS JetStream. Hands-on experience with API design and service-to-service communication patterns.
 - Mentored 5 engineering interns/junior developers, all of whom were promoted to Engineer II as a direct result of structured mentorship and technical guidance.
 - Help develop internal API documentation with Next.js
-

Software Engineer

Cengage

June 2018 – December 2020

- Developed interactive K–12 educational applications using React and Java Spring Boot in a fast-paced agile environment.
 - Built reusable UI components and contributed to an organization-wide design system, improving UI consistency and reducing duplicated component work.
 - Partnered with QA engineers to establish testing and release standards, improving production stability and reducing regressions.
 - Participated in sprint planning, feature implementation, and cross-team collaboration across multiple education product lines.
-

Front-End Developer

MySmartSimulations, Inc.

January 2014 – June 2018

- Built the front-end for a healthcare training platform delivering tutorials, simulations, and certification modules to medical professionals.
 - Ported Unity3D simulations to JavaScript-based web applications, eliminating native runtime dependencies and expanding platform accessibility.
 - Designed and implemented user interfaces from Photoshop mockups, collaborating with project managers and stakeholders throughout development cycles.
 - Delivered highly interactive learning experiences using modern web technologies.
 - Helped set up a LAN at Labs where our products were used.
 - Installed switches and routers in our office
 - Configured new computers and setup user accounts
-

Tech Artist

WayForward Technologies

February 2011 – August 2013

- Collaborated with C++ engineers to implement gameplay interactions and cutscenes using Lua scripting.
- Built internal artist tools using MaxScript, improving asset pipeline efficiency and reducing manual workflow overhead.

- Created 3D models and animations for shipped titles including *Silent Hill: Book of Memories* and *The Smurfs 2*.
-

IT Support Technician

Aroa Marketing

July 2009 - February 2011

- Assisted the IT Manager in supporting a user base of 50+ employees across hardware, software, and network issues
 - Set up and configured computers, printers, and peripherals for new and existing staff
 - Helped install and configure network switches and structured cabling
 - Provided hands-on troubleshooting support to resolve day-to-day connectivity and hardware issues
 - Served as a first point of contact for employee tech support requests, escalating more complex issues to the IT Manager
 - Answered calls and helped customers troubleshoot their devices such as RC cars, watches and spy cameras
-

Personal Projects

Full Stack Engineer

[Shotsapp.io](https://shotsapp.io)

March 2026

Designed, built, and shipped a creator monetization platform solo — from concept to deployed product with real users — using AI-assisted development tools (Claude, Cursor) throughout. Photographers and artists run public pages with tips, memberships, posts, and commission listings.

- Architected the full stack independently: React (Vite) + TypeScript + Tailwind frontend; Node.js + Express + PostgreSQL backend with JWT auth, Zod validation, and structured pagination.
- Integrated Stripe Checkout and Connect end-to-end — tips, subscriptions, commission checkouts, webhooks, and direct creator payouts.
- Built an S3-backed media pipeline with EXIF handling, image placeholders, and gated content patterns.
- Implemented AI features via OpenAI API: server-side image moderation before storage, vision-based captions, and bio generation.
- Leveraged Claude and Cursor throughout development to accelerate delivery without compromising code quality or architecture decisions.

Education

ITT Technical Institute

Associate Degree of Science

Recipient of the **Outstanding Student Award** at graduation.
